Castlebrae Community Campus

Craigmillar, Edinburgh, Scotland

A new, inspiring learning environment for Craigmillar community

Castlebrae Community Campus officially opened its doors in Spring 2022. The new 700 capacity secondary school, which has the potential to be increased to 1,200, was constructed next to the East Neighbourhood Centre and Library (a project Metal Technology also delivered for Hub South East Scotland).

Designed by JM Architects and delivered by Morrison Construction, this fantastic new building for The City of Edinburgh Council provides an exciting, inspirational and creative learning hub for the community. It forms one of the final pieces of a 20 yearlong regeneration project to improve housing stock and community facilities in the area. The development was very much a collaborative design, with numerous workshops and meetings to engage the community in the process.

The relationship between the interior and exterior of the building was crucial, developing a holistic approach to improve the learning, attainment and health and wellbeing of the community. Metal Technology Ltd supplied its System 4-35Hi+ top hung windows, System 17 curtain walling, System 5-20D Hi+ doors and System 23 louvres and were manufactured and installed by approved fabricator Avtek Ltd.

A wonderful new learning space and environment for the school's pupils - we're delighted to have been a part of this build for the Craigmillar community.
